

System Features and Benefits:

- Enhanced situational awareness of airfield activity at both the snow desk and the supervisor's vehicle
- Navigate safely in low-visibility situations
- On-Board Information System for critical documents
- Full Internet access from within the vehicle
- Display the location of other appropriately equipped airfield vehicles in real-time
- Prioritize snow and ice control routes
- Keep the airfield open longer and avoid costly delays
- Use WinterOps™ Pro with Eagle's AVL System (ATIMS™) to display the locations of all equipped airfield vehicles

Improve the Performance of Winter Airfield Operations.

- Keep your airfield open
- Reduce disruptions to flight operations
- Improve overall safety and efficiency
- Improve communications between operations, management and ATC

WinterOps™ - Another 'SmartAirport™' product from Eagle Integrated Solutions

WinterOps™ Pro

Integrated system of hardware and software created to assist in the management of highly complex snow events.

WinterOps™ Pro

Improves the performance of winter airfield operations

- **Communication of Critical Information:** Real-time, GPS stamped graphical runway condition reporting in the inspection vehicle and at the snow desk.
- **Increase Safety:** Receive accurate and timely information on the location and activity of all snow fighting equipment.
- **Enhanced Chemical Management:** Save dollars and protect your environment by applying chemicals only when and where needed.

WinterOps™ Pro

Modules to Meet Individual Airport Requirements

Runway Condition Reporting Module (RCR)

- Integrates environmental conditions, Global Positioning (GPS) location and advanced networking infrastructure.
- Real-time friction and temperature values automatically recorded and displayed graphically on the airfield map.
- Allows ATC and operations personnel to instantly view the conditions of the runways, in their own formats; NOTAM for ATC & situational awareness pictures of "conditions" for the snow team.

Equipment Integration Module

- Allows supervisor (in inspection vehicle or office) to communicate with and command spraying and spreading equipment.
- Supervisor, with a touch of the screen, can deploy tasks to equipment, specifically requesting certain action to be taken at certain locations.
- Supervisor is automatically alerted as to what actions have been completed at specific locations.
- All data is GPS and time-stamped for accurate record keeping and auditability.

Additional Airfield Inspections

- Add other airfield functions such as work order deployment and CMMS's to get maximum value from one system.
- Integrate other 'SmartAirport™' inspection solutions such as Bird & Wildlife and Lighting.

WinterOps™ Pro

A vital tool in any airfield snow event arsenal
